Announcement of First Liquid from CAMERON LNG Train 1

Chiyoda Corporation (TSE: 6366; ISIN: JP3528600004) is pleased to announce that Train 1 of the Cameron LNG project in Hackberry, La., has produced liquefied natural gas (LNG). While production is in the initial phases, this significant project milestone is a precursor to first cargo, which is expected later this quarter.

Chiyoda International Corporation (CIC), a U.S. based wholly-owned subsidiary of Chiyoda and its joint venture partner on the project, McDermott International, Inc. are proud of their project team for this achievement and for their exceptional safety performance during the construction phase. Once Train 1 is at full production and Trains 2 and 3 would be completed, this facility will be one of the largest producers and exporters of LNG to markets around the world.

Since the initial award in 2014, the Joint Venture between CIC and McDermott has provided the engineering, procurement and construction for the Cameron LNG project. The project includes three liquefaction trains with a projected export capacity of more than 12 million tonnes per annum of LNG, or approximately 1.7 billion cubic feet per day.

Cameron LNG is jointly owned by affiliates of Sempra LNG, LLC, Total, Mitsui & Co. Ltd. and Japan LNG Investment, LLC, a company jointly owned by Mitsubishi Corporation and Nippon Yusen Kabushiki Kaisha (NYK).

About Chiyoda

Chiyoda Corporation, headquartered in Yokohama, Japan provides services in the fields of engineering, procurement and construction on a global basis for gas processing, refineries other hydrocarbon or industrial plant project, particularly gas value chain project, in the USA, South East Asia, the Oceania regions, the Middle East and Russia.
