PRESS RELEASE

1 April 2021

Summary of April 2021 President's Message to New Employees

The following is a summary of the April 2021 President's Message to new employees by Mr. Masaji Santo.

Welcome to Chiyoda Corporation.

As you are no doubt aware, employee safety and welfare is Chiyoda's top priority and, although the number of members able to participate in this year's welcoming ceremony is limited due to COVID 19, senior colleagues unable to attend also welcome your arrival.

I would like to introduce our current major business activities. In February, we were awarded the EPC contract for the massive Qatar LNG expansion project, which will account for approximately 10% of the world's annual LNG production. Chiyoda continues contributing to the growing drive towards a decarbonized society through increased LNG production, a typical clean energy source. We have also validated hydrogen as the ultimate clean energy source by establishing the world's first global hydrogen supply chain demonstration system, transporting hydrogen from Brunei to Japan for use as fuel in a gas fired power plant.

In other business fields, we aggressively engage in life science activities, including a vaccination plant for coronavirus and bio-pharmaceutical plants.

Our mission is to provide solutions in 'Energy', 'Environment' and 'Health', areas that I regard as important and worthwhile, through innovative 'Engineering'. I am confident that our engineering business as a solution provider is a worthwhile vocation.

From today, your future is bright.
We wish to grow together.
I sincerely hope for your success.
